**DIGITAL PRINT FINISHING SOLUTIONS**

## XL TJOL

Automatic Cutter + Automatic Aligning Table

(Patents Pending)

**FULLY AUTOMATIC** IN LINE FINISHING SYSTEM FOR HP Scitex TJ 8300/8500

**XL TJOL Automatic Cutter**

The HP Scitex TJ 8300/8500 printers with the **FOTOBA** automatic cutter is a complete solution.

With the **FOTOBA CUTMARKS** generated by the RIP and the **TRUE IMAGE EDGE TRACKING** (Fotoba patent pending) the cutting and trimming is done while you print.

When the last job exits the printer, it is printed, cut and trimmed ready for delivery. Resulting in better workflow, utilizing less production space and most importantly, your delivery promises can be kept.

Your labor savings will be significant.

The ROI is often less than one year.

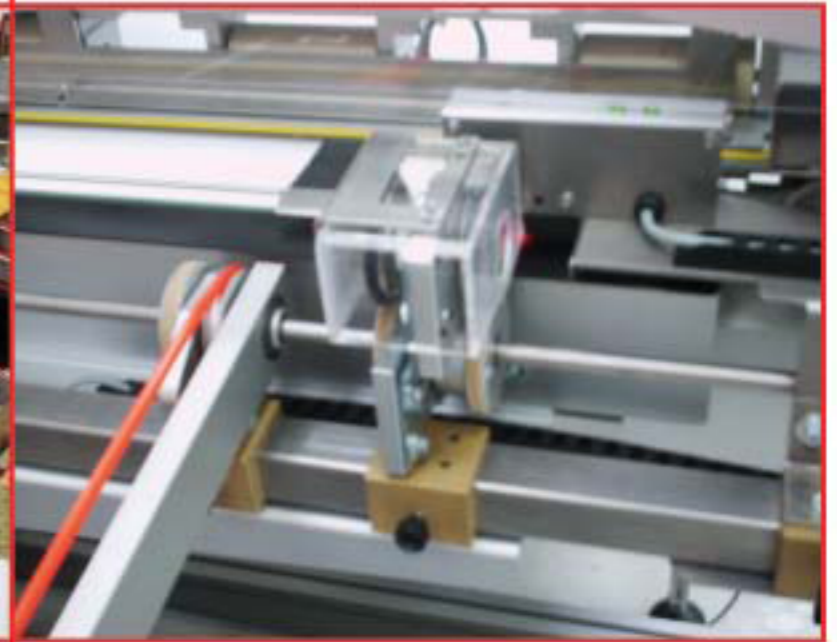

Re-printing because of damaged prints down the line in the finishing operation is now completely eliminated.

The Automatic Alignment Table receives the printed page from the printer and feeds it correctly into the cutter.

The cutter reads the **FOTOBAs CUT MARKS**, squares the X and Y blades to the image edges and automatically finishes the job.

The exit sorting tools (optional) position the jobs on the collecting table.

**Characteristics:\***

- Power supply : 100 - 240 Vac/400w (250+150)
- Required space : 2,824mm X 4,938
- Productivity : one sheet with 3 images 100x140cm (40x55in) trimmed in 32 seconds
